TearCare® System – Patient Important Safety Information.

Indications for Use: The TearCare® System is intended for the application of localized heat therapy in adult patients with evaporative dry eye disease due to meibomian gland dysfunction (MGD), when used in conjunction with manual expression of the meibomian glands. Potential adverse events associated with the use of the TearCare® system include: swelling, redness or discomfort of eyelids, allergic reaction to medical adhesive, temporary visual disturbance such as blurry vision, foreign body sensation, stye, or blocked oil glands, temporary worsening of dryness in the eye. Please talk to your doctor for complete risk information, and to discuss whether the TearCare® system is right for you.
